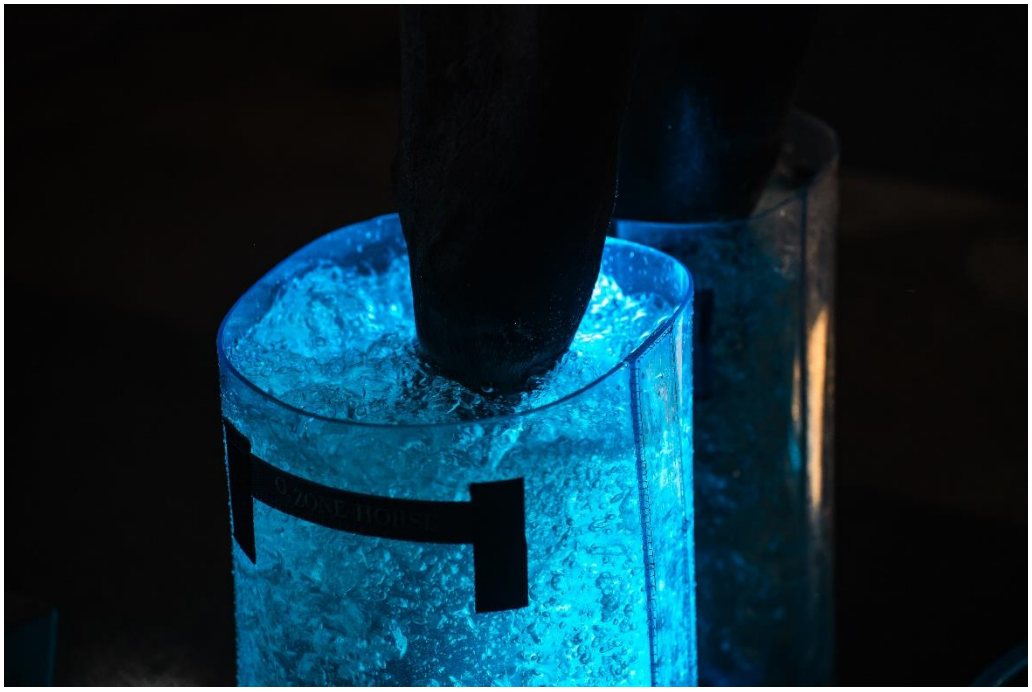
O_3 ZONE HORSE

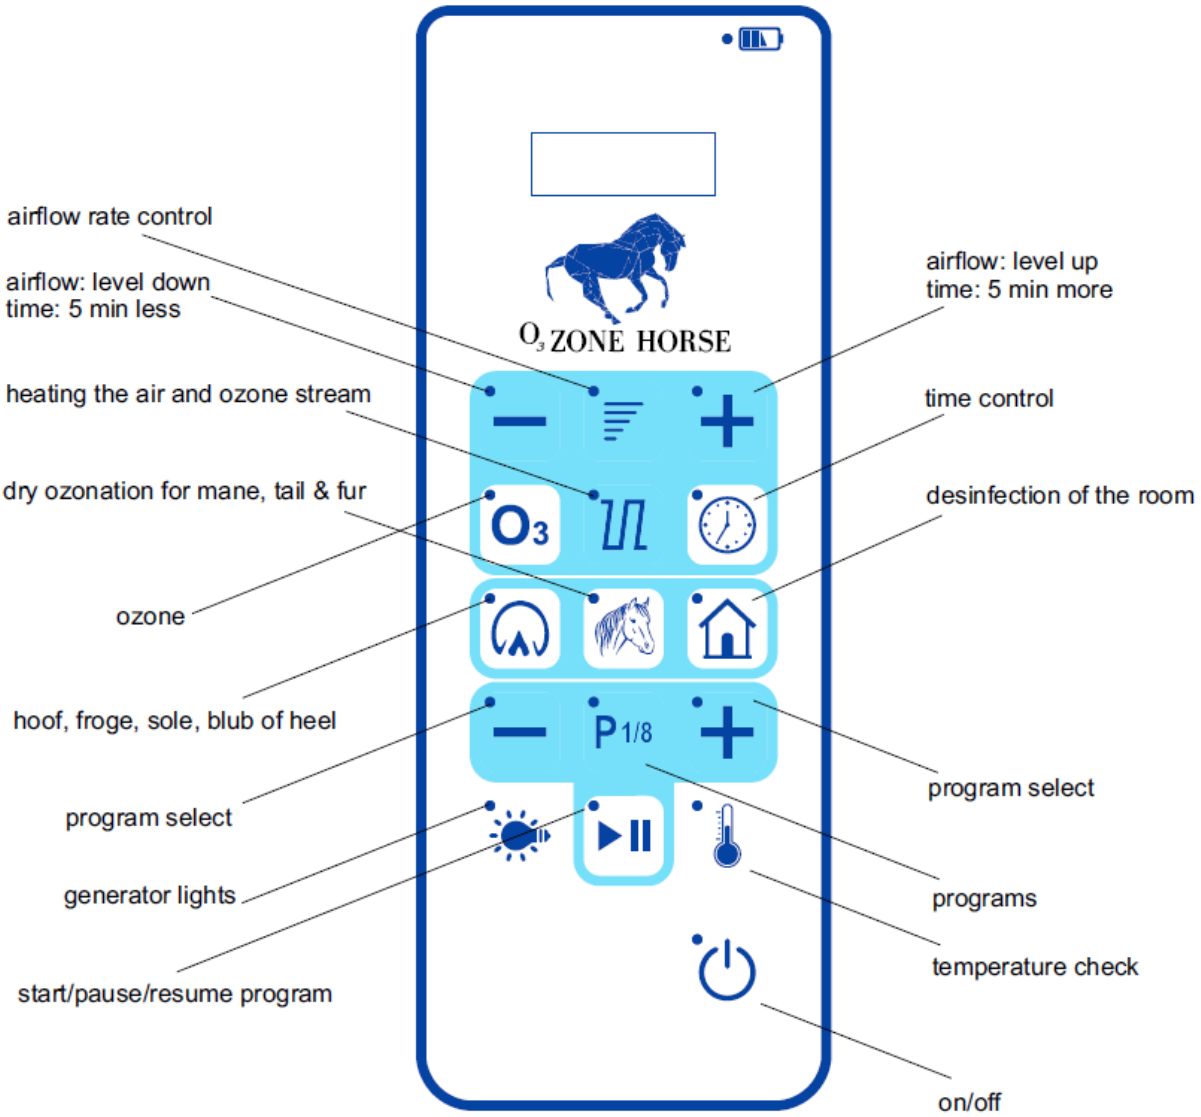
"SPORT HORSE CARE AT ITS FINEST"

Quick Guide



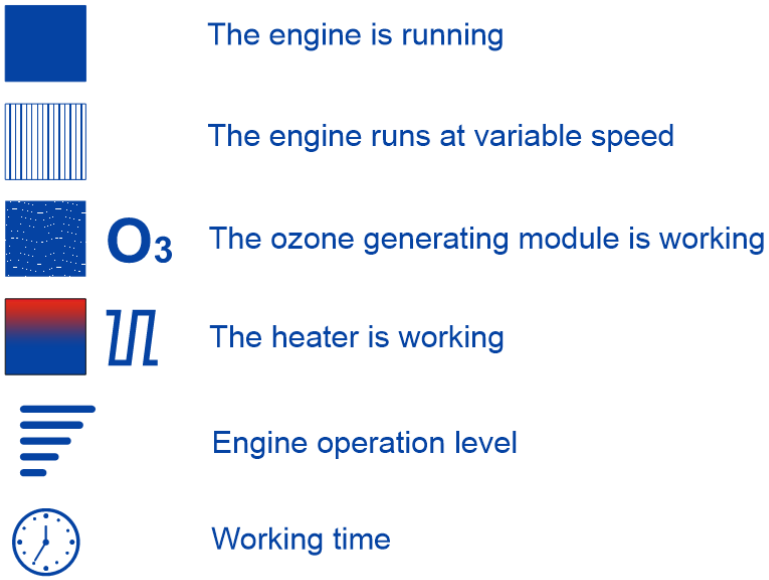
O₃ ZONE HORSE

Remote Control



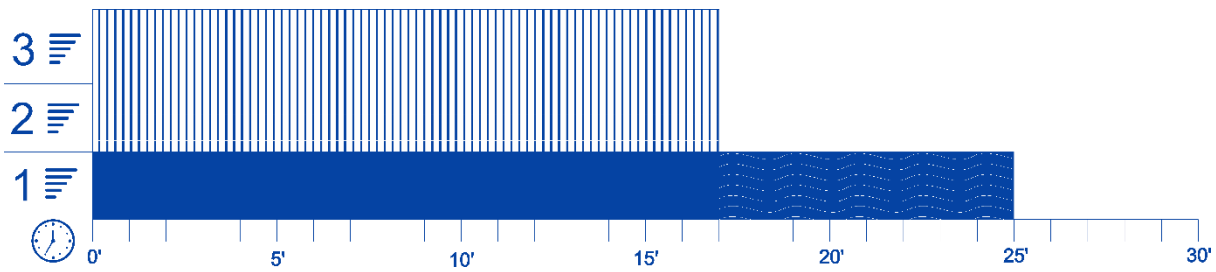
Preset Programs

LEGEND



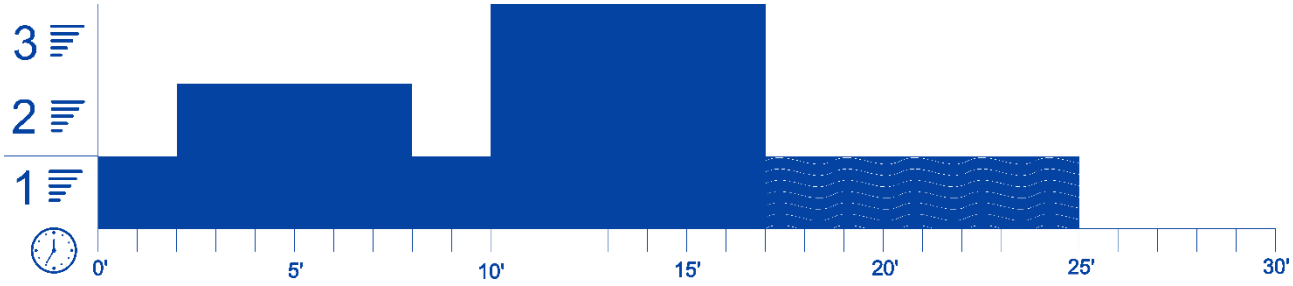
P - 01 Energizing programme

Programme which makes your horse feel full of energy.



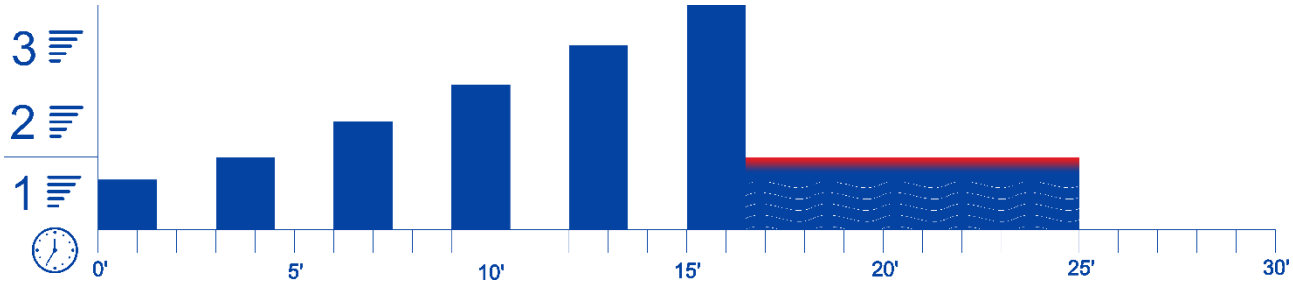
P – 02 Relaxing programme

Programme of relaxation after a stressful day, recommended to nervous horses which get agitated easily by external stimuli.



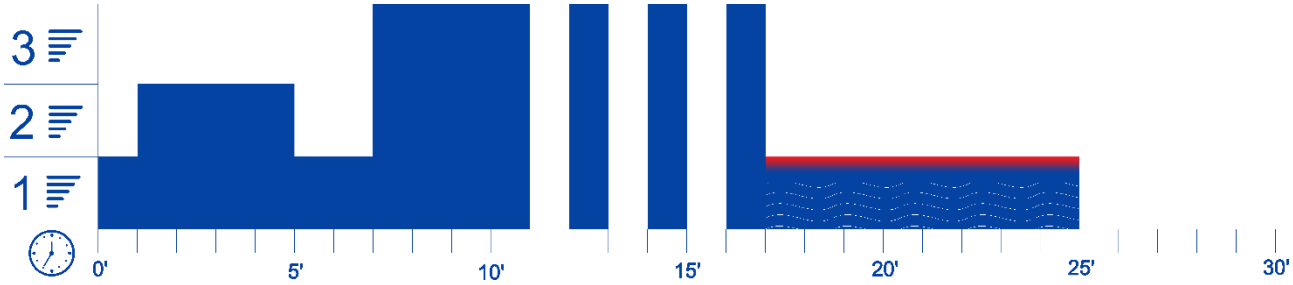
P - 03 Activating programme

Programme stimulating blood circulation in organism.



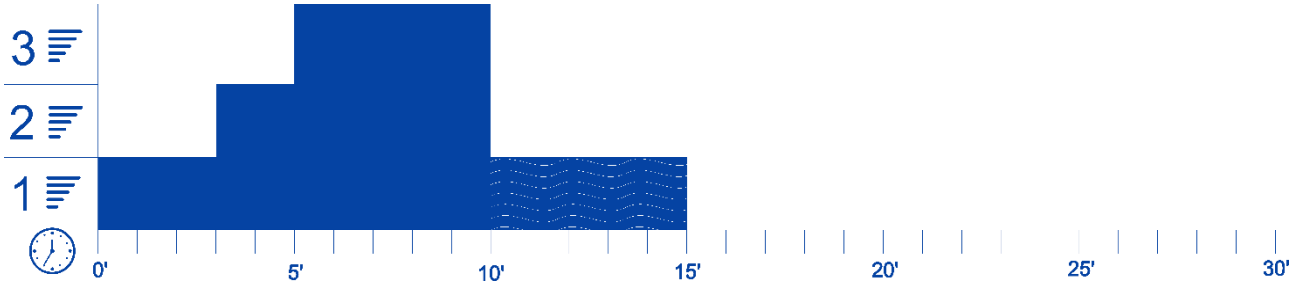
P – 04 Sports programme

Programme of body refreshment and strengthening.



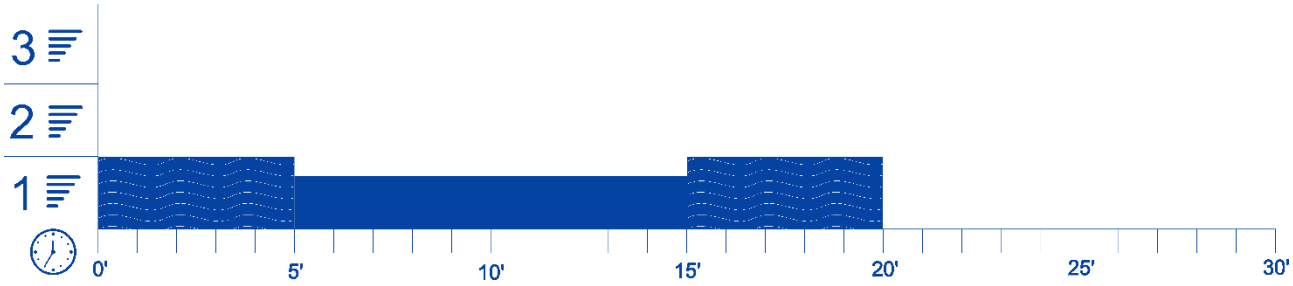
P – 05 Warm-up programme

15 minutes of stimulating energy which refreshes a horse's body and prepares it for a demanding day.



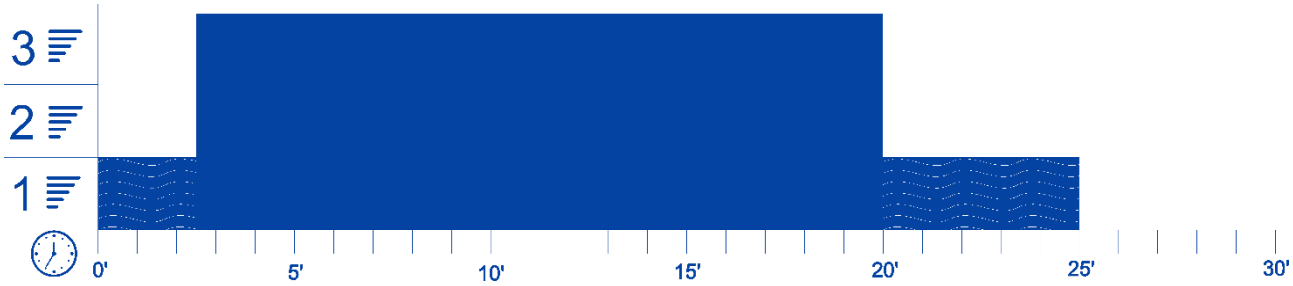
P – 06 Evening programme

Programme of relaxation after competition, demanding workout or long transport.

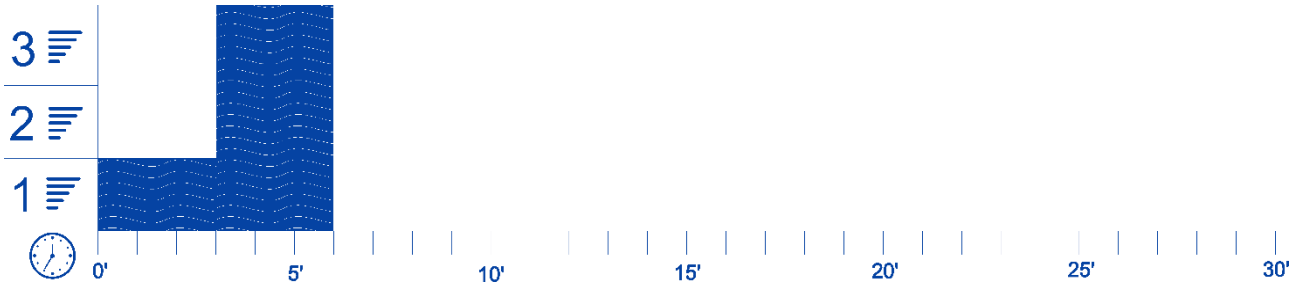


P – 07 Stimulating programme

Programme facilitating the elimination of muscle soreness and tension.

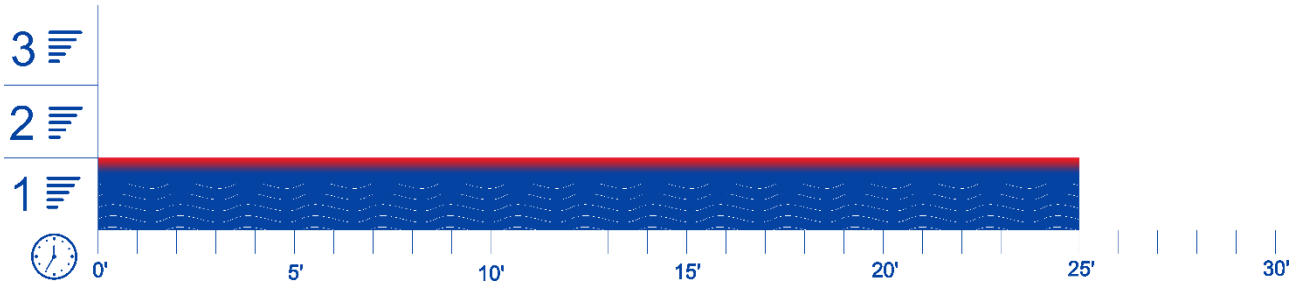


P – 08 Device cleaning programme



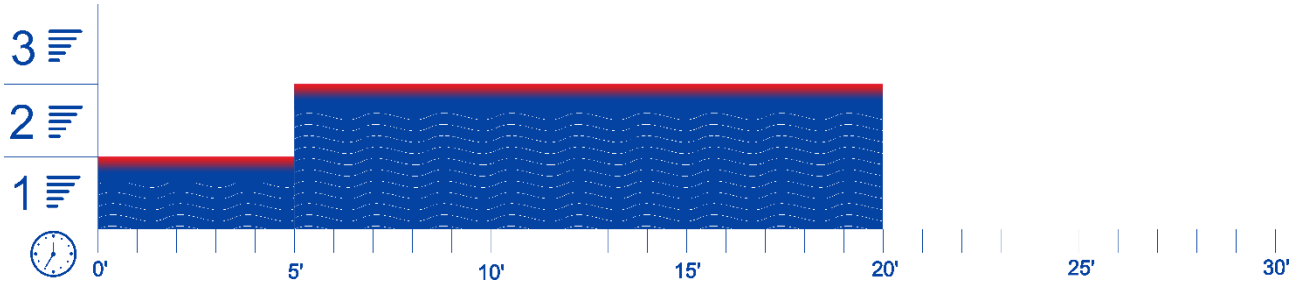
Programme for the ozone treatment of hoof wall

Ozone bath for hooves is performed in the ozone shoe poured with water up to the gambrel level. A bath massage stimulates important nerve centres, thus contributing, among other things, to fibula blood flow. Especially recommended for laminitis and other ailments of hooves.



Programme for the disinfection of wounds and the care treatment of hair, mane and tail

Ozone works best when it contacts a wet or damp surface, so it is ideal when it contacts wet hair or wound. It covers hair and wounds with a stream of warm air rich in ozone (controlled and safe concentration), it dries them up, delicately oxygenating and hygienizing.



Ozone shortens the time of drying and massages horse skin delicately, activating microcirculation.

Ozone promotes the formation of a protective substance layer (peptone)

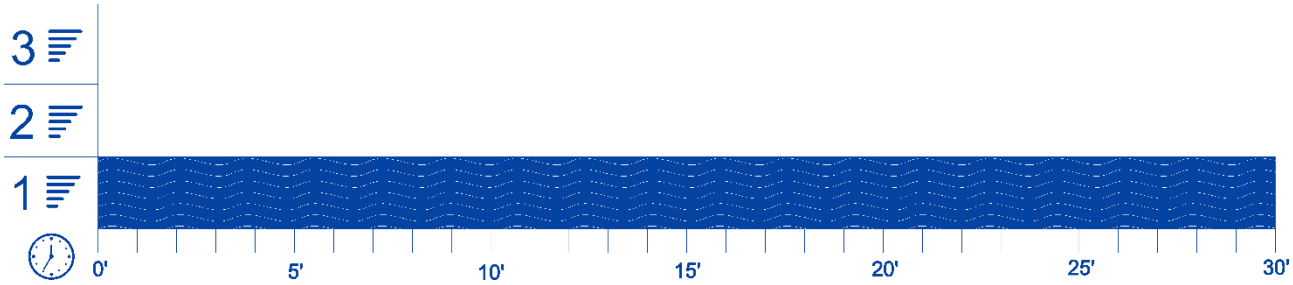
Ozone boosts the effect of a colourant because it contributes to the formation of bonds between the colourant and the ingredients of hair

Ozone reduces electrostatics because it is a ionisation process

Ozone reduces exfoliation and eczema; these phenomena are generally related to the proliferation of fungal flora and the bacterial and microcirculation imbalance. Ozone promotes the conditions of the recovery of microflora and correct microcirculation.

OZONE fulfils key functions in the modern therapy of aesthetic medicine. It is bactericidal * and it contributes to the increase of oxygenation, it easily reaches all the epidermal tissues. Simple application may bring in significant benefits. Healthier and softer hair. Everyday use also helps eliminate "unpleasant" odours, maximum programme duration up to 20 minutes (first 5 minutes with ozone) may be used to treat hair thanks to a special tip.

PROGRAMME FOR THE OZONE TREATMENT OF ROOMS



This programme is used for the ozone treatment of rooms by means of the OzoneHorse device. When the programme is executed, the room under ozone treatment must be closed and empty of any people or animals. The device informs when it is allowed to enter the room by deactivating the sound and light signal. When the room disinfection programme is finished, it is recommended to air the room.

O3 ZONE HORSE

Treatment Table

It is recommended to use under supervision of a veterinarian surgeon / zoophisiotherapist		I phase - I month		II phase - next months	
Disease	*temperature of water*	*I airflow*	*II airflow*	*I airflow*	*II airflow*
SDFT Tendinitis	8 - 10 C	20 min		10 min	10 min
DDFT Tendinitis	-+ 30 C	15 min	5 min	10 min	10 min
AL. - DDFT / ICL desmitis	-+ 30 C	15 min	5 min	10 min	10 min
Suspensory desmitis	-+ 30 C	15 min	5 min	10 min	10 min
Tenosynovitis	-+ 30 C	15 min	5 min	10 min	10 min
Constriction of annular ligament / acute stage of inflamation (In the initial phase)	-+ 30 C	15 min	5 min	10 min	10 min
	temperature of water	*I airflow*	*II airflow*	*I airflow*	*II airflow*
Swelling of the soft tissues	8 - 10 C	5 min	20 min		
Cellulitis	28 - 32 C	20 min			
Lymphangitis	28 - 32 C	5 min	15 min		20 min
	temperature of water	*I airflow*	*II airflow*	*I airflow*	*II airflow*
Laminitis	7 - 10 C	10 min	15 min		
Exudative dermatitis of frog - thrush / Hoof cancer	28 - 29 C	10 min	15 min		
	temperature of water	*I airflow*	*II airflow*	*I airflow*	*II airflow*
Intensive training / Competition					
after training / competition	8-9 C	5 min	15 min		
OR					
before last feeding	-+ 15 C	5 min	15 min		
Pastern dermatitis		Dry treatment support - ozone blowing action			
Dermatitis / eczema		15 min + ozonated oil			
Dermatomycoses
